## Petition for a Moratorium on the Marlborough Wind Farm Project

Whereas the Marlborough Wind Farm proposal would place Industrial Wind Turbines 800 metres of at least 30 families in the community of North Gower and double regular noise levels for residents in that community;

Whereas credible scientists and physicians are warning about the adverse health risks affecting those who live in close proximity to Industrial Wind Turbines;

Whereas A summary of new evidence: Adverse health effects and industrial wind turbines concluded that 20% of the population are the most at risk, experiencing: "annoyance, stress, sleep disturbance, headache, tinnitus, ear pressure, dizziness, nausea, visual blurring, tachycardia, irritability, problems with concentration and memory, and panic episodes associated with internal pulsation or quivering when awake or asleep."

Whereas Health Canada and Statistics Canada have embarked on a health research study that will explore the relationship between noise pollution caused by wind turbines and the health effects reported by, and objectively measured in, Canadians living near wind turbines;

Whereas the said study will be entirely transparent and is being designed by experts in noise, health assessment, clinical medicine and epidemiology;

We the undersigned request the government to support a moratorium on the Marlborough Wind Farm project proposed for just outside the village of North Gower, in the City of Ottawa, until the Health Canada study is complete.
